Project Objective

Teachable RefPrep

Turn it into

Our Application

Usable in

RefReps

Use ideas from Teachable
(What RefPrep currently is)

Build our own course
management system

Their current IOS
application

Mentor Feedback

Mid-Iteration

- Talk to the client and find realistic expectations in iteration 1.
- Focus on small objectives at a time

End-Iteration

- Talk to client and find/set reasonable expectations for iteration 2.
- Make specific plans, tasks and agendas for the team to follow

Client Feedback

- Multiple videos able to be uploaded at once, rather than just one at a time that we have as of now
    - Up to 40 is the initial goal.
- Dropbox functionality is a quality of life feature that the client is very interested in for uploading videos. (low priority, high QoL)
- Client liked our pitch for the next iteration plan, and is relaying it to see if any other features need to be focused more on.

Iteration 2 Feature Plans

- Create new course
- Add new section
- Add a new module to a section
- Reorder sections, modules, and content
- Edit course, module, section, content info from front end
- Video Streaming
- Course Creation (copying a template course)
